

EXP 3 - BANK LOAN APPLICATION

Name: Bakkialakshmy P

Roll No: 240701067

1. AIM

To design and develop a **Bank Loan Application & Pre-Screening Management** system using **Zoho Creator**, a low-code application development platform, and to study how low-code technology can simplify the development of a digital loan application process.

The application is designed to replace the traditional paper-based loan enquiry process with a structured digital form that collects applicant details, contact information, employment and income details, loan requirements, existing liabilities, and credit-check consent.

2. TRADITIONAL APPLICATION DEVELOPMENT VS EMERGING TRENDS IN LOW-CODE APPLICATION DEVELOPMENT

2.1 Traditional Application Development

In a traditional approach, a Bank Loan Application system would normally require developers to manually write code for the user interface, database, validation, authentication, business logic, workflows, and reports.

For example, developers may use technologies such as:

- HTML and CSS for the user interface
- JavaScript for validation
- Java/Python/.NET for backend development
- SQL for database management
- APIs for system integration

The general development process is:

Requirement Analysis → UI Design → Coding → Database Development → Testing → Deployment → Maintenance

For a bank loan application, separate programming would be required for applicant registration, loan forms, validation, database storage, reports, notifications, and workflow processing.

2.2 Low-Code Application Development

Low-code application development allows applications to be developed using visual interfaces, drag-and-drop components, pre-built fields, workflows, reports, and dashboards with minimal manual coding.

In this project, **Zoho Creator** is used to develop the Bank Loan Application.

The basic development process is:

Create Application → Create Form → Add Fields → Configure Validation → Create Report → Add Workflow → Test → Deploy

For example, the Bank Loan Application uses Zoho Creator's built-in fields such as:

- Name
- Email
- Address
- Phone
- Single Line
- Multi Line
- Number
- Date
- Time
- Drop Down
- Radio
- Multi Select
- Checkbox

This reduces the amount of programming required to create the application.

2.3 Application of Low-Code in the Bank Loan System

The low-code approach is applied to the project as follows:

Requirement	Low-Code Implementation
Applicant details	Name field
Email collection	Email field
Contact details	Phone field
Address collection	Address field
PAN details	Single Line field
Loan purpose	Multi Line field
Monthly income	Number field
Date of birth	Date field
Callback scheduling	Time field
Loan selection	Drop Down field
Employment selection	Radio field
Existing liabilities	Multi Select field
Credit consent	Checkbox field
Application records	Report
Validation	Field properties and validation rules
Acknowledgement	Workflow/automation

Thus, Zoho Creator provides many of the required components without requiring the complete application to be coded manually.

3. BENEFITS AND CHALLENGES OF LOW-CODE FOR BANK LOAN APPLICATION

3.1 Benefits

1. Faster Development

The Bank Loan Application can be created quickly using pre-built fields and visual form-building components.

2. Reduced Coding

The developer does not need to manually program every form element, validation, and report.

3. Easy Form Creation

The 13 Basic Fields can be added directly from the Zoho Creator Form Builder.

4. Structured Data Collection

Instead of handwritten paper forms, applicant information is collected in a structured digital format.

5. Data Validation

Mandatory fields, email formats, income values, and other validation rules can be configured to reduce incomplete or incorrect submissions.

6. Easy Report Generation

Submitted loan applications can automatically appear in the **Loan_Application_Report**, allowing loan officers to review the records.

7. Workflow Automation

Automated actions such as acknowledgement emails can be configured using workflows.

8. Easy Maintenance

Fields, forms, reports, and workflows can be modified through the visual development environment.

9. Better Pre-Screening

Loan officers can filter applications based on details such as:

- Loan Type
- Employment Type
- Monthly Income
- Existing Liabilities

This helps organize applications before document verification.

3.2 Challenges

1. Platform Dependency

The application depends on the features and services provided by Zoho Creator.

2. Customization Limitations

Highly specialized banking requirements may require additional scripting or integrations.

3. Security

Loan applications contain sensitive personal and financial information. Proper access control and security configuration are therefore important.

4. Integration Requirements

A real banking system may need integration with credit bureaus, core banking systems, payment systems, and other external services.

5. Vendor Lock-In

Moving the complete application to another platform may require additional development work.

6. Platform Learning

Although low-code reduces programming, users still need to understand forms, workflows, reports, permissions, and platform-specific features.

4. COMPARISON OF EXISTING LOW-CODE PLATFORMS

The following platforms can be compared for developing an application similar to the Bank Loan Application.

Feature	Zoho Creator	Microsoft Power Apps	Mendix	OutSystems
Form Creation	Supported	Supported	Supported	Supported
Drag-and-Drop Development	Yes	Yes	Yes	Yes
Database/Data Storage	Supported	Supported	Supported	Supported
Workflow Automation	Supported	Supported	Supported	Supported
Reports	Supported	Supported	Supported	Supported
Dashboards	Supported	Supported	Supported	Supported
Mobile Support	Supported	Supported	Supported	Supported

Feature	Zoho Creator	Microsoft Power Apps	Mendix	OutSystems
API Integration	Supported	Supported	Supported	Supported
Validation	Supported	Supported	Supported	Supported
Suitable for Business Applications	Yes	Yes	Yes	Yes
Manual Coding Requirement	Low	Low	Low	Low

Platform Relevance to the Bank Loan Application

Zoho Creator

Zoho Creator can be used to create the complete Bank Loan Application using forms, reports, workflows, and dashboards. In this project, it is used to create the **Loan_Application_Form** and **Loan_Application_Report**.

Microsoft Power Apps

Power Apps can be used to create business applications and can integrate with Microsoft services and data sources.

Mendix

Mendix provides visual application development features suitable for developing and managing business applications.

OutSystems

OutSystems provides low-code tools for developing web and mobile business applications with support for integrations and enterprise requirements.

5. RESULT

The **Bank Loan Application & Pre-Screening Management** system was successfully designed using the low-code development approach in **Zoho Creator**.

The application demonstrates the use of the **13 Basic Fields** available in the Zoho Creator Form Builder to collect applicant information, contact details, employment and income details, loan requirements, existing liabilities, and credit-check consent.

The application also demonstrates form validation, report generation, and workflow-based processing. Compared with traditional application development, the low-code approach reduces manual coding and simplifies the development of forms, reports, and business workflows.

Therefore, the project demonstrates how a low-code platform can be used to convert a traditional paper-based bank loan enquiry process into a structured digital application and pre-screening system.
